

# Redefining the future of workforce management

AI-enabled workforce management will be standard by 2030\*, and the shift is already underway. And as contact centers face rising complexity, a new model is taking hold: hybrid workforces, powered by both people and agentic AI.

From forecasting and scheduling to quality assurance and continuous improvement, CX leaders can now manage every agent—AI or human—side by side, in a single system.

That's why Parloa and Verint have partnered to deliver the first enterprise-grade solution designed for this hybrid future.

## Parloa + Verint at a glance

	<b>Integrated Platforms</b>	Verint Workforce Engagement + Parloa AI Agent Management

# The first fully integrated hybrid workforce solution

## Why CX Leaders Choose Parloa & Verint

Most AI solutions can require new workflows, disconnected dashboards, and duplicated effort. That approach breaks down under pressure, especially when you're managing high-volume demand.

Parloa + Verint gives CX leaders shared insights, unified tools, and faster outcomes.

Parloa + Verint bring agents - AI and human - together in one system:

### Shared QA

Score, review, and improve AI agents with the same Verint solutions used for human teams. No process reinvention required.

### Integrated Scheduling

Forecast and staff across both agent types from a single WFM engine—balancing automation with human touch to reduce burnout.

### Performance Transparency

Use real, side by side performance data to understand where AI is outperforming, underperforming, or ready to scale.

### Coordinated Coaching

Identify coaching moments across both types of agents—driving more efficient improvement.

### Consistent CX

Whether a customer talks to a human or AI, they get the same high quality, personalized experience.
